***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1, 4-6, and 8-11, drawn to a system and method with a storage device for storing data relating to a tender of a multi-variable commodity having a term, a processing device for generating the tender created by the tender initiator, a communication network for transmitting information corresponding to the tender and receiving a request from the tender recipient to change the term of the tender, classified in class 705, subclass 26.
- II. Claim 15, drawn to a method for receiving via the communications network in communication with the tender recipient a request to change the term of the multi-variable commodity, transmitting via the communications network in communication with the tender recipient, a request to change the term of the multi-variable commodity, and accepting via the communications network in communication with the tender

recipient, a request from the tender initiator to change the term of the multi-variable commodity, classified in class 705, subclass 37.

- III. Claims 17, 19-22, and 24, drawn to a system for utilizing the tender created by a tender initiator with a storage device for storing data relating to a term of a tender for a complex multi-variable commodity with the tender having an exception request permitting a change to the term of the multi-variable commodity, a processing device for transmitting and receiving information corresponding to the stored data, classified in class 710, subclass 241.
- IV. Claims 26, 28, 38, and 39, drawn to a method for receiving a tender via a network of processing devices in communication with a tender initiator data for a term of a tender with the tender provided for a complex multi-variable commodity, transmitting via the communication network the tender corresponding to the received data with the tender having an exception request, accepting via the network of processing devices in communication with the tender initiator a request from the tender recipient for an exception to change the term of the tender, classified in class 707, subclass 1.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II and III and IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant

case, the different inventions have different scopes, furthermore they have different modes of operation thus yielding different effects and are not capable of use together for the reason set forth.

Restriction for examination purposes as indicated is proper because all these inventions listed in this action are independent or distinct for the reasons given above and there would be a serious search and examination burden if restriction were not required because one or more of the following reasons apply:

- (a) the inventions have acquired a separate status in the art in view of their different classification;
- (b) the inventions have acquired a separate status in the art due to their recognized divergent subject matter;
- (c) the inventions require a different field of search (for example, searching different classes/subclasses or electronic resources, or employing different search queries);
- (d) the prior art applicable to one invention would not likely be applicable to another invention;
- (e) the inventions are likely to raise different non-prior art issues under 35 U.S.C. 101 and/or 35 U.S.C. 112, first paragraph.

**Applicant is advised that the reply to this requirement to be complete must include (i) an election of a invention to be examined** even though the requirement may be traversed (37 CFR 1.143) **and (ii) identification of the claims encompassing the elected invention.**

The election of an invention may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse. Traversal must be presented at the time of election in order to be considered timely. Failure to timely traverse the requirement will result in the loss of right to petition under 37 CFR 1.144. If claims are added after the election, applicant must indicate which of these claims are readable on the elected invention.

If claims are added after the election, applicant must indicate which of these claims are readable upon the elected invention.

Should applicant traverse on the ground that the inventions are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

The Restriction was necessitated by the amendments.
